

ENECON Introduces CeramAlloy CL+ [AC] in a Special “AFFF Red” Color for the US Navy

First coat of CeramAlloy Grey color followed by a second coat of CeramAlloy AFFF Red

CeramAlloy has been specified by the US Navy for many years for preservation of AFFF Station decks. Over the years it has had a flawless performance record. The Navy, however, wanted a special red color to match some of its other deck coatings.

ENECON was pleased to oblige and now offers its CeramAlloy CL+[AC] in an AFFF RED color which conforms to the Navy's requirements. Numerous AFFF Station deck preservation projects have been carried out with this special AFFF Red color since its introduction in 2002, on a variety of different classes of ships – including aircraft carriers.
