# Is Safety Important to You... and other insane questions!

By Brien Neil, Enecon Corporation

I recently had occasion to purchase a new automobile and one of the questions the salesman asked me during the test drive was "Is safety important to you?" I must admit I was a bit taken aback that someone would actually have to ask this question.

It goes without saying; no matter what field you are involved in safety is always the top priority. In the case of those responsible for maintaining the

schools in the State of Washington, the safety of the students, teachers, your personnel, and the safety of the building(s) you are responsible for maintaining are paramount.

So rather than asking "Is safety important to you?" let me ask, "Do any of these problems sound familiar?"

- Trip and fall hazards created by deteriorated concrete

- Slippery floors and shower areas
- Existing non-slip surfaces failing (step nosings, ramps, etc.)
- Leaking pipes
- Loose handrails
- Frayed / damaged insulation

At ENECON Corporation we are firmly committed to producing products that have no odor, are safe, easy to use and simple to maintain. Your

staff can easily apply our products and achieve professional results with a nominal amount of training from our team, or if you prefer, we will be happy to work with you to provide complete turnkey application services.

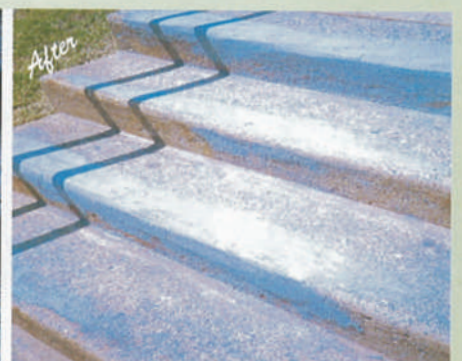

We have worked extensively over the last decade with the US Navy, the nuclear power industry, large commercial property owners, etc. to provide cost-effective solutions to many of their most challenging problems.

So whether your issue is something basic such as the problems listed above or a more complex issue like an aging cooling tower, evaporator, or condenser, give us a call to see what cost-effective and commercially proven solutions we might have to offer.

*Brien Neill is the Vice President/Western Operations and an eleven-year veteran at ENECON Corporation.*
