

Chocolate & Candy Factory in Northern California Salvages Sugar Silo with CHEMCLAD XC

This world famous chocolate and candy manufacturer, headquartered in San Francisco, California, turned to the ENECON NorCal team to salvage this severely corroded 40+ year old sugar silo. Replacement would have taken months and cost

over \$250,000 before demolition and installation costs for a new silo.

The ENECON team suggested grit blasting the silo and then applying two coats of CHEMCLAD XC, which was chosen for its NSF certificate for potable

water and unsurpassed corrosion protection. Furthermore, ENECON NorCal added significant value by minimizing downtime, providing a turnkey solution and allowing manufacturing to resume in just a few days.

This project is being completed in two steps. The cone was done first since it was the most severely corroded. The rest of the silo has been scheduled to be completed in about a month. The entire project cost is about \$60,000.
