

## U.S. Navy Selects CeramAlloy To Protect Critical Cooling Water System Components

When it comes to superior protection of its most critical components, the U.S. Navy routinely turns to ENECON and specifies *METALCLAD CeramAlloy CL+AC* to repair and protect its fluid flow components from erosion & corrosion damage from sea water.

After each cooling water system component was carefully grit blasted to a 3 mil profile, and inspected, ENECON NorCal then coordinated the application of two coats of *CeramAlloy CL+AC*, first coat gray and second coat blue.

These components are now protected **better than new** and ready to be re-installed on the vessel.
