EROSION or CORROSION PROBLEMS?

We'll show you how to rebuild and resurface your pump casings and impellers damaged by erosion, corrosion, cavitation, chemicals, etc. at a fraction of the cost of conventional repair or replacement procedures.

Our high performance polymers can also improve pumping efficiency.

Water-Based Liquid Coating

ENECON Corporation, a producer of polymer composites technology, has announced the release of ENESEAL CR. This is a single component, water-based, liquid coating which dries to a highly durable, corrosion resistant, elastomeric "skin" that provides extraordinary environmental protection to metal and concrete/masonry surfaces. It can also be applied as a top coat over most zinc primers.
