

Major International Paper Company Selects CHEMCLAD SC To Protect Vital Plant Machinery & Equipment

This large Canadian pulp and paper mill, part of a well known international paper company, had been looking for a high performance maintenance coating that could be used to protect critical machinery and equipment throughout their massive plant.

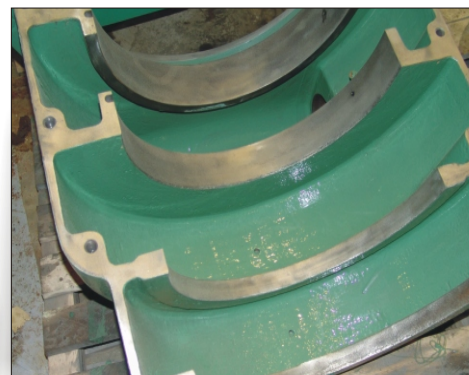

Over the years, they had tried many different types of coating systems but these provided only limited performance. The local ENECON distributor based in Montreal suggested that the plant engineers try CHEMCLAD SC. He assured them that this extraordinary material would give them the long-term performance they were

looking for. It was also easy to apply and odor-free which were two additional concerns the plant engineers had.

After numerous field trials, the engineers agreed that CHEMCLAD SC was the best high performance maintenance coating they had ever used.

But there was still one more concern, *“could the SC be provided in their special green color?”* Since the plant was willing to purchase over 50 units of the SC, ENECON agreed to produce the custom green color for them.

Here are just a few examples of where the CHEMCLAD is being used regularly.

700 Hicksville Road • ENECON Center Suite 110 • Bethpage, NY 11714
