

## Dura-Grip Safety System Eliminates 'Slippery' Hazard on Major Orange Juice Distributor's Loading Docks & Ramps

These loading docks and ramps at a major orange juice distributor in the Northeastern U.S. were slipping hazards - both in bad weather and after any product spills.

The facilities manager was looking for a very durable, yet cost effective solution.

The local ENECON Field Engineering Specialist recommended that all surfaces be thoroughly grit blasted and all severely damaged concrete be repaired with **DuraQuartz**.

Over 40 **DuraFill** systems were then installed over almost 20,000 sq. ft. of loading docks and ramps. Garnet aggregates were broadcast into the **DuraFill** to provide the required slip resistant properties.
