

Aquatic Center Youth Splash Pads Repaired With ENECRETE

A very popular Northern California community park called on the local ENECON Distributor to repair and restore their aquatic center youth splash pads.

The first step was to completely strip the existing pad by bead blasting the entire area, all while protecting the water jets, metal posts and other vital components.

The area was then cleaned and all cracks were

repaired with **ENECRETE DuraFill** mixed with locally sourced aggregate. After carefully confirming the two precise blue colors, the design borders were marked off with tape.

The blue aggregate was then mixed with **DuraFill**, creating a saturated texture that also gave a nice anti-slip finish once a second and final topcoat of **DuraFill** was applied.
