

Major International Poultry Producer Based in Thailand Sold on ENEFLOW to Control Their Hard Water Mineral Scale Problems

BEFORE

The plant manager at this very large poultry processing plant near Bangkok, Thailand, was a little skeptical when the ENECON Field Engineer in Thailand explained the potential benefits of the ENEFLOW Power Cells to control mineral scale build-up due to the very hard water at the facility -- one of the most modern in S.E. Asia.

operate for 30 days. At the end of the test period the composite section of pipe was removed and inspected.

The plant manager was amazed at the results: The old section of pipe -- which was heavily scaled -- was now scale-free, while the new section of pipe showed no signs of any scale build-up.

He decided to run his own test. He had two pipe sections welded together; one old section with heavy scale deposits in it and a new (clean) section of pipe. This composite test section of pipe was installed in their cooling water circuit.

The plant manager was so impressed with the ENEFLOW Power Cells' performance that he immediately ordered 4 more sets to protect additional sections of the plant's cooling water systems.

Two pair of ENEFLOW 5000's were installed upstream of the test section and the system was left to
