

Industry in Thailand Turning to METACLAD CeramAlloy to Solve Serious Erosion & Corrosion Problems in Pumps

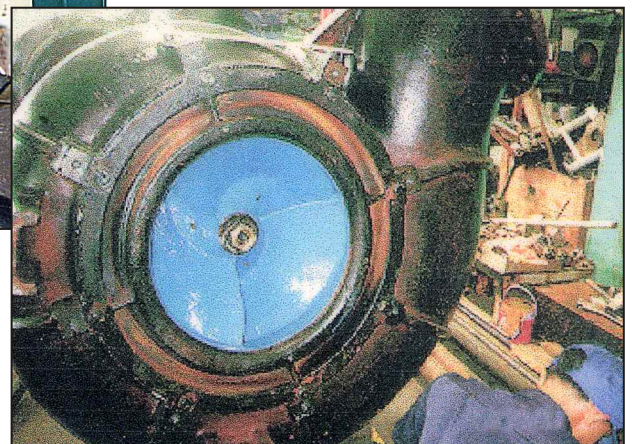

METACLAD CeramAlloy has become the high performance repair and protection material of choice within a growing number of top companies in Thailand.

This application of CeramAlloy CL+ [AC] is typical of the many cost effective applications that are being carried out in Thailand regularly.

In this instance, these large submersible pumps are prone to accelerated

erosion/corrosion damage from sand and silt entrained in the local river water.

ENECON's CeramAlloy systems provide the best solutions to these and many other fluid flow systems problems in major plants and commercial facilities throughout the world.
